

- **Singles:** serves must land after the short service line and within the back boundary line. The side tramlines are out (long and thin)
- **Doubles:** serves must land after the short service line and within the long service line. The side tramlines are in (short and fat)
- The shuttle must be struck below the server's bottom rib

BACKHAND FLICK SERVE

Played from the front of your service box diagonally to the rear of your opponent's court.

Why?

- To catch your opponent by surprise
- To create space at the front of the court

Common Faults	Corrections	Key Service Laws
Shuttle and racket too close to body.	Hold both out with straight arms.	• Feet in contact with floor throughout serve • Strike shuttle below waist (lowest rib) • Continuous forward swing (no double motion)
Dropping shuttle, not hitting from hand.	Hold shuttle in finger tips, hit straight from fingers.	
Lack of depth achieved.	Relax grip – tighten on impact to produce flick/punch. Check you have slight turn of racket face on backswing – helps to get more power on forwards swing.	

Using the information above and your chosen observations, **IDENTIFY** two strengths of the player observed.

1

2

1

- Relaxed thumb grip
- Racket and shuttle held well in front of body
- Racket pointing downwards

2

- Short backswing, with slight turn of racket edge towards stomach
- Shuttle held still

3

- Squeeze fingers and thumb on racket
- Hit with a sharp flicking action
- Shuttle hit from hand

4

- Racket ready for next shot
- Anticipate next shot

Based on your observations **RECOGNISE** two areas for development and suggest how to improve performance.

1

2

LESSON 2:

Forehand Net Shot

SKILL (15 minutes)

Introduce the key technical points of the Forehand Net Shot to the group, outlined on the following page

- In pairs, player A feeds the shuttle (underarm throw) five times over the net and their partner (player B) plays a forehand net shot
- Player B aims to push the shuttle over the net and land it before the short service line
- Change roles after five shots
- For more advanced players, encourage the feeder to stand further back and throw the shuttle overarm to imitate a drop shot

SKILL PROGRESSION (15 minutes)

- Working in pairs, players aim to have a net shot rally across a net using a basic grip
- The maximum number of net shots played in a row scores this game
- Vary backhand and forehand net shots to encourage players to change grips

Points

- After a set time, add together each pairs' maximum number of net shots played in a row to calculate a class record
- Award bonus points if players perform a net shot that hits the net tape and travels over
- Players then change partners and try to beat the class record

GAME (10 minutes)

- Split the group into two teams and allocate each player a number
- Players hit net shots in turn, in a sequence of: one - two - three - four - five - six - seven - eight – repeat
- After playing the net shot, players travel to the drop-down spot where they shadow another stroke, then return to the back of the queue, facing the net at all times
- How many net shots can the team play in a row?
- Can you beat your/class record?

Game Variations

- Play 'Lives'
- Each pupil has three lives
- If they miss the net shot, hit it out, or in the net, they forfeit a life
- When players have lost all three lives they are out

TOP TIPS

- If players struggle, use shorter rackets or lower the net

FOREHAND NET SHOT

Played from your forecourt to the forecourt of your opponent, low over the net.

Why?

- To move your opponent forward
- To create space behind
- To force your opponent to hit upwards

Common Faults	Corrections
Hand not above racket head.	Hit with strings sloping towards net.
Lack of control.	PUSH shuttle, keeping relaxed grip and strong wrist.
Contact too low.	Place spare shuttle in net 30cm below tape – practice net shots with racket above this height.

1

- Basic grip ☐
- Hand above racket head (bent wrist) ☐
- Strings presented to shuttle ☐
- Reach ☐

2

- Extended front (racket) leg ☐
- Front foot pointing towards probable impact point, landing heel first, then toe ☐
- Strong upright body position ☐
- Rear arm extended for balance ☐

3

- Take shuttle early to pressure opponent ☐
- Use a pushing action ☐
- Knee bends in same direction that the foot is pointing ☐
- Rear foot turned out for greater range of movement ☐

4

- Rear leg slides in, to assist recovery ☐

Using the information above and your chosen observations, **IDENTIFY** two strengths of the player observed.

1

2

Based on your observations **RECOGNISE** two areas for development and suggest how to improve performance.

1

2

LESSON 3:

Forehand Underarm Lift

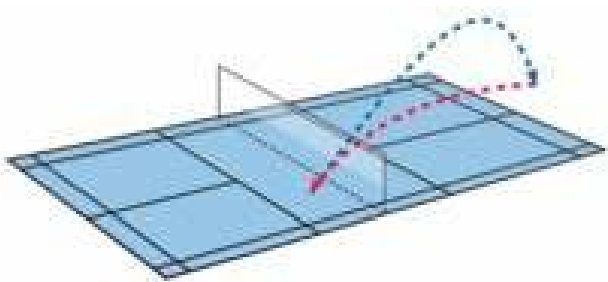

SKILL (15 minutes)

Introduce the key technical points of the Forehand Underarm Lift to the group, outlined on the following page

- With two players, one player hits from the rear-court to the fore-court (red line)
- The other player lifts the shuttle back using a forehand underarm lift (blue line)
- The first player catches the shuttle and feeds it again
- After five hits, change roles

SKILL PROGRESSION (15 minutes)

- With two players, one player hits from the rear-court to the fore-court (red line)
- The other player lifts the shuttle back using a forehand underarm lift (blue line)
- Players then keep the rally going using the same routine of drop and clear

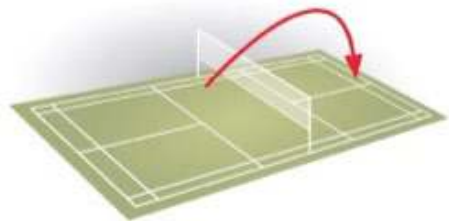

GAME (10 minutes)

- Play a game of half court singles
- The server starts the point with a low serve
- The returner plays a net lift sending the server to the rearcourt
- The rally is then played to a conclusion
- If the returner fails to play a net lift, they automatically lose the point

TOP TIPS

- Making your shots look the same is a good way to add deception
- If your opponent does not recover into the rear court having played a shot from the forecourt, it could be a good time to hit a lift
- Low lifts allow less time for your opponent to recover
- High lifts can push your opponent to the rear of the court and allows you more time to recover

FOREHAND UNDERARM LIFT

Played from the forecourt to the rearcourt of your opponent.

Why?

- To move your opponent back
- To create space in front
- To exert pressure (flat) or create time (high)

Common Faults	Corrections
Shuttle dragged cross-court.	If you want the shuttle to go down the line, hit along the line. Shadow the shot and keep the racket head along the tramline as long as possible. Get someone to throw shuttles to you along the tramline whilst you hit it back along the line.
Exaggerated long swing.	Focus on flicking the shuttle. Assess yourself to see how many lifts you can do without taking racket head behind body. Use partner to assist you and feed back on this.
Lunge misaligned.	Shadow lunge and make sure knee bends in same direction that foot points.

1

- Basic grip ☐
- Reach towards shuttle ☐
- Racket head above hand ☐

2

- Push hand forwards ☐
- Bend wrist to create "L" shape between racket and forearm ☐
- Front (racket leg) extended, with toes pointing towards probable impact point ☐

3

- Lunge lands heel then toe – knee bends where foot points ☐
- Straighten wrist (flick) to hit through shuttle ☐
- Non-racket arm back for balance ☐
- Rear foot turned out – helps range of movement ☐

4

- Rear leg slides to control momentum ☐
- Controlled follow through – keep racket out in front of body ready for next shot ☐

Using the information above and your chosen observations, **IDENTIFY** two strengths of the player observed.

1

2

Based on your observations **RECOGNISE** two areas for development and suggest how to improve performance.

1

2

LESSON 4:

Forehand Overhead Clear

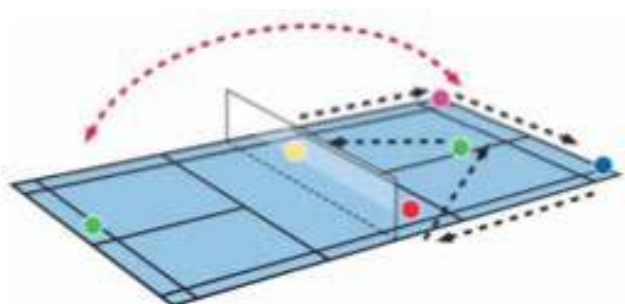

SKILL (15 minutes)

Introduce the key technical points of the Forehand Overhead Clear to the group, outlined on the following page

- In pairs, players stand on opposite sides of the net
- One player feeds the shuttle high, whilst the other player performs a forehand overhead clear
- Repeat five times and then switch direction to aim the shuttle cross-court
- Encourage player to move into the stroke e.g. split step and chasse
- Repeat five times and then change roles

SKILL PROGRESSION (15 minutes)

- In a team, players work together (e.g. five players), travelling around a course as indicated by the black dotted lines in the diagram below
- As they move around the course, players must face the net (they can never fully turn their back on the net)
- At the position indicated by the green dot, players will strike the shuttle with a forehand overhead hitting action
- On the other side of the net, one player (other green dot) performs clears continuously to keep the rally going
- Players to watch the shuttle at all times and players moving along the back line to move back if the shuttle is hit deep

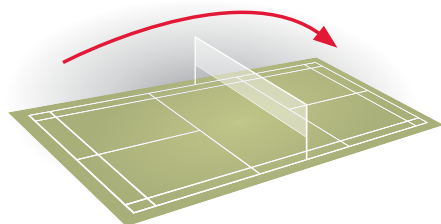

GAME (10 minutes)

- 'Around the World' challenges players to improve their overhead forehand clears which involves them needing to; prepare early, move into the 'lightning bolt' position and strike the shuttle overhead with a trajectory that allows both sides to play an overhead
- The shuttle must travel beyond the halfway length of the court, if not the shuttle is out
- The rally starts with a high serve, followed by continuous clears
- Players take it in turn to hit the shuttle before running around to the other side of the court to join the queue
- Each player has three lives (chances)
- If a player misses the shuttle or hits it in the net, or out of court - they lose a life
- When only two players remain, they play on opposite sides of the net and do not need to run around to the other side

TOP TIPS

- During the skill progression, players move backwards to the shuttle, then forwards in recovery. This movement is closely related to requirements of a player in a badminton game.
- How many clears can the team hit consecutively? Can you beat your team record?

FOREHAND OVERHEAD CLEAR

Played from your rearcourt of your opponent.

Why?

- To move your opponent back
- To create space in front
- To exert pressure (flat) or create time (high)

Common Faults	Corrections
Panhandle grip.	Mark racket handle close to bevel of racket – line up webbing between thumb and first finger with this mark. Encourage striking above/slightly in front of racket shoulder.
Lack of forearm rotation – wrist dominated hit.	Strike suspended object (e.g. balloon) using forearm rotation only.
Contact too low.	Strike object (e.g. balloon) suspended at height that forces you to reach.

Using the information above and your chosen observations, **IDENTIFY** two strengths of the player observed.

1

2

1

- Basic grip ☐
- Begin to establish sideways stance ☐

2

- Weight on rear (racket) leg ☐
- Front arm relaxed and raised ☐

3

- Body begins throwing action – hip drives up and through ☐
- Momentary creation of "L" shape between forearm and racket ☐
- Racket face visible from side view ☐

4

- Throwing action using forearm rotation ☐
- Contact above racket shoulder ☐
- Racket leg kicks through and lands after impact ☐

Based on your observations **RECOGNISE** two areas for development and suggest how to improve performance.

1

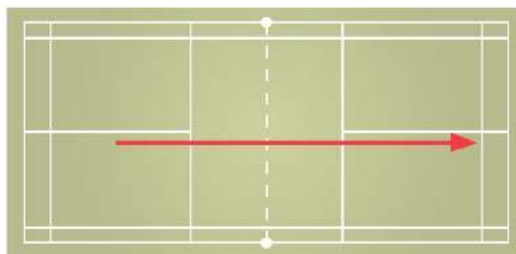

2

LESSON 12:

Tactical Matches

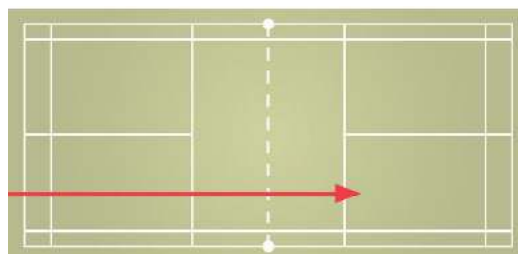

MATCH 1 - SINGLES (12 minutes)

- Play half court singles (or full court singles if space allows)
- During the game, if you hit the shuttle in the rearcourt and win the rally you score three points
- Consider what happens during the rally when you hit shots into the rearcourt?
- Compare the advantages and disadvantages
- Can your opponent guess your tactic?

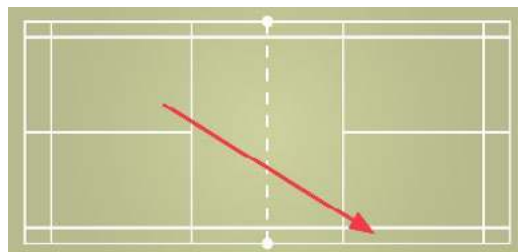

MATCH 2 - SINGLES (12 minutes)

- Play half court singles (or full court singles if space allows)
- During the game, play mainly attacking shots (minimal lifts or clears)
- Consider what happens during the rally when you play attacking shots?
- Compare the advantages and disadvantages
- Can your opponent guess your tactic?

MATCH 3 - DOUBLES (12 minutes)

- Play full court doubles
- When receiving the serve, only attacking returns are permitted
- Consider what happens during the rally when you attack the serve?
- Compare the advantages and disadvantages
- Can your opponent guess your tactic?

LESSON 5:

Forehand Overhead Drop

SKILL (15 minutes)

Introduce the key technical points of the Forehand Overhead Drop to the group, outlined on the following page

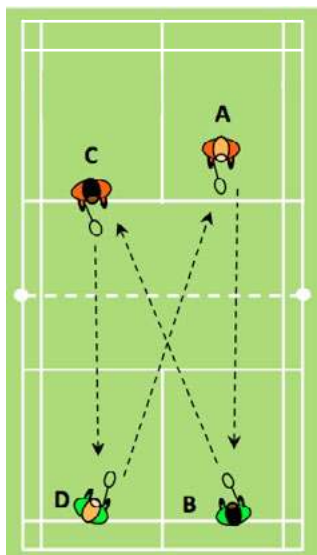

- In pairs, one player high serves and their partner returns with a forehand overhead drop shot
- The rally then continues where the server continually lifts the shuttle high and their partner returns with a forehand drop shot
- Experiment with straight and cross-court drop shots

SKILL PROGRESSION (15 minutes)

- With four players on a court, follow this routine
- A high serves to B
- B overhead drop shots to C
- C forehand underarm lifts to D
- D overhead drop shots to A
- And the routine continues

Points

- Count the number of shots achieved in a row
- Count the number of complete A to D circuits

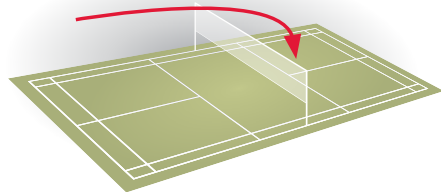

GAME (10 minutes)

- Play a game of doubles where the point can only be played to a conclusion once the initial routine has been completed

TOP TIPS

- For the initial skill, if players struggle to keep the rally going, let the returned shuttle land on the floor before serving again

FOREHAND OVERHEAD DROP

Played from your rearcourt to the forecourt of your opponent.

Why?

- To move your opponent forwards
- To create space behind
- Attempt a winner or to gain a weak reply
- To exert pressure (flat) or create time (high)

Common Faults	Corrections
Panhandle grip.	Mark racket handle close to bevel of racket – line up webbing between thumb and first finger with this mark. Encourage striking above/slightly in front of racket shoulder.
Loss of throwing action in favour of a "point and poke" action.	"Throw then slow" the racket.
Contact too low.	Strike object (e.g. balloon) suspended at height that forces you to reach.

Using the information above and your chosen observations, **IDENTIFY** two strengths of the player observed.

1

2

1

- Basic grip ☐
- Begin to establish sideways stance ☐
- Racket strings facing the floor ☐

2

- Weight on rear (racket) leg ☐
- Front arm relaxed and raised ☐

3

- Body begins throwing action – hip drives up and through ☐
- Momentary creation of "L" shape between forearm and racket ☐
- Racket face visible from side view ☐

4

- Throwing action using forearm rotation ☐
- Contact above racket shoulder ☐
- Racket leg kicks through and lands after impact ☐

Based on your observations **RECOGNISE** two areas for development and suggest how to improve performance.

1

2

LESSON 6:

Forehand Overhead Smash

SKILL (15 minutes)

Introduce the key technical points of the Forehand Overhead Smash to the group, outlined on the following page

- In groups of four, players experiment smashing from different areas of the half court
- One player (A) feeds five shuttles, one shuttle to each of the four areas (blue, red, yellow, green) of the court in turn
- Player B practises smashing the shuttle
- Player C and D observes the smashes
- Rotate roles after five smashes

SKILL PROGRESSION (15 minutes)

- Progress the activity by giving the players the option to perform a smash, a clear or a drop shot
- Encourage players to think about when would be the best time to play each shot
- Consider why it might be risky to smash from the back line
- What are the disadvantages of smashing when off balance?

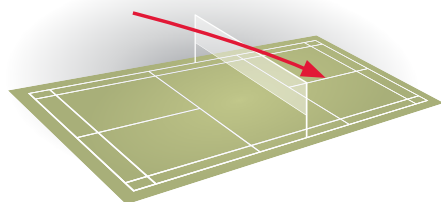

GAME (10 minutes)

- Play a game of doubles and encourage players to think about their shot selection i.e. when to play a clear, smash or drop shot

TOP TIPS

- Continuous smashing is very physical and difficult to maintain, resulting in only a small number of good quality consecutive smashes, therefore set a low numerical target so players can focus on the quality of the skill

FOREHAND OVERHEAD SMASH

Played from your mid/rear court aiming for the midcourt of your opponent.

Why?

- To hit a winner
- To gain a better chance to win a rally
- To put your opponent under pressure

Common Faults	Corrections
Panhandle grip.	Mark racket handle close to bevel of racket - line up webbing between thumb and first finger with this mark. Encourage hitting in front, but not too far in front, of striking shoulder.
Loss of balance and control trying to hit too hard.	Hit from a stable base and step through, then gradually increase jump and turn in the air.
Contact too low.	Strike object (e.g. balloon) suspended at height that forces you to reach. Aim to smash to targets that make you hit more steeply (you will have to reach to hit the targets).

Using the information above and your chosen observations, **IDENTIFY** two strengths of the player observed.

1

2

1

- Basic grip ☐
- Wide sideways stance ☐

2

- Rear leg drives up and forwards ☐
- Hip thrown forwards followed by shoulder ☐
- Momentary creation of "L" shape between forearm – racket ☐

3

- Explosive throwing action using forearm rotation ☐
- Contact slightly in front of racket shoulder ☐

4

- Racket leg kicks through and lands after impact ☐

Based on your observations **RECOGNISE** two areas for development and suggest how to improve performance.

1

2

LESSON 7:

Forehand and Backhand Drive

SKILL (15 minutes)

Introduce the key technical points of the Forehand and Backhand Drive to the group, outlined on the following page

- In pairs, one player (A) feeds the shuttle and their partner practises a forehand drive
- Player A lets the shuttle land on the court, collects it and feeds it again
- After five attempts they change roles
- Once both players have had a go, repeat the activity using a backhand drive
- Players to focus on the following movements when hitting the shuttle
 - Perform/time a split-step to land with their opponent's hit
 - Split and then step/move quickly towards the shuttle
 - Recover back to a ready position

SKILL PROGRESSION (15 minutes)

- In threes, players practise their drives
- Player A throws a shuttle to B to play a forehand drive over the net toward the targets
- Player C scores each attempt, collects the shuttle and returns it to A to feed again
- Each player has five attempts and then changes roles
- Repeat with a backhand drive, The hoops will need to be moved so player hits straight (down the line)

Points:

- One point for landing shuttle in back service court
- Five points for hitting the hoop targets

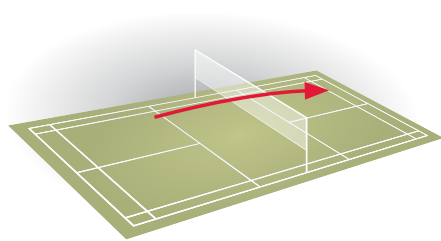

TOP TIPS

- If players struggle with the skill, hand feed a shuttle to the player from the side of the court
- Players can also hit against a target on a wall. They can self-feed or keep the rally going against the wall

GAME (10 minutes)

- Play half court singles or full court doubles
- Servers to start the point with a low serve
- Returners to return with a forehand or backhand drive
- The point is then played to a conclusion

FOREHAND DRIVE

Played from your midcourt, to the midcourt or rearcourt of your opponent.

Why?

- To avoid hitting upwards
- To hit space wide of your opponent
- To create space at the other side

Common Faults	Corrections
Big swing from shoulder.	Promote use of arm rotation to produce power and rebound to shorten follow-through.
Lack of knee foot alignment.	Shadow lunge movement in isolation, then shadow shot – aim for knee bends where foot points.
Not using extended non-racket arm for balance.	Freeze on impact – self assess non-racket arm position.

- Basic grip
- Wide stance
- Racket head above hand

☐
☐
☐

- Racket rotates backwards by rotating arm
- "L" shape between forearm and racket created
- Lunge on racket leg – foot points towards likely impact point

☐
☐
☐

- Arm rotates forwards
- Contact higher than wrist and early
- Knee bends in same direction foot points

☐
☐
☐

- Racket leg bends to allow push off
- Racket stops/rebounds (reduced follow through)

☐
☐

Using the information above and your chosen observations, **IDENTIFY** two strengths of the player observed.

1

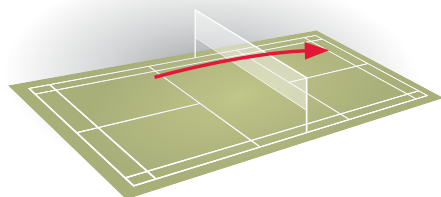

2

Based on your observations **RECOGNISE** two areas for development and suggest how to improve performance.

1

2

BACKHAND DRIVE

Played from your midcourt to the mid/rearcourt of your opponent.

Why?

- To avoid hitting upwards
- To hit space wide of your opponent
- To create space at the other side

Common Faults	Corrections
Big swing from shoulder.	Stand with back to net, close enough to feel the net on the back of your head. Shadow a backhand drive, ensuring the racket head does not touch the net on the backswing. Repeat but strike a shuttle.
Long follow through.	Focus on tapping the shuttle with limited follow-through – player self assesses finishing racket position.
Lunge misaligned.	Shadow lunge and make sure the knee bends in same direction that foot points.

Using the information above and your chosen observations, **IDENTIFY** two strengths of the player observed.

1

2

1

- Thumb grip
- Wide stance
- Push off racket leg

☐
☐
☐

2

- Lunge on non-racket or racket leg
- Knee and foot in alignment (pointing towards shuttle contact)

☐
☐

3

- Elbow up and forwards
- Racket head back using forearm rotation – "what time is it" position
- Racket "L" shape created between racket and forearm

☐
☐
☐

4

- Keep elbow up
- Use forearm rotation/elbow extension to strike shuttle
- Contact in front of body
- Racket rebounds/stops quickly after impact

☐
☐
☐
☐

Based on your observations **RECOGNISE** two areas for development and suggest how to improve performance.

1

2

LESSON 8:

Backhand Net Shot

SKILL (15 minutes)

Introduce the key technical points of the Backhand Net Shot to the group, outlined on the following page

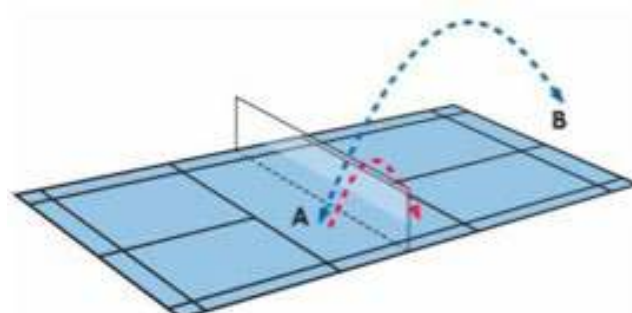

- In pairs, one player feeds the shuttle (underarm throw) five times over the net and their partner plays a backhand net shot
- They push the shuttle over the net and try to land the shuttle in a target area
- After five hits, players change roles
- Award points for getting the shuttle over the net and into the target area
- Encourage players to move in and out of the stroke e.g. split-step, chasse, lunge

SKILL PROGRESSION (15 minutes)

- Progress the above activity by making it a competition
- Whoever scores the most points moves up one court, and the runners-up move down one court so they each face new opponents

GAME (10 minutes)

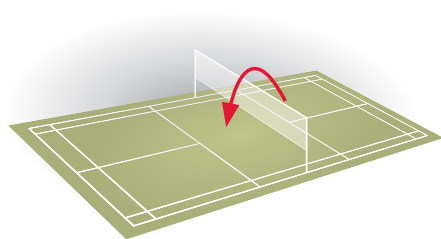

- Play half court singles
- Play begins with player A performing a high serve
- Player B aims to return the shuttle to land in the forecourt (blue line)
- Player A then moves forward to perform a backhand net shot (red line)
- The rally is then played to a conclusion, with any shots being allowed

TOP TIPS

- To make the skill harder, vary backhand and forehand feeds so players must alternate between grips
- Or decrease the target size

BACKHAND NET SHOT

Played from your forecourt to the forecourt of your opponent, low over the net.

Why?

- To move your opponent forwards
- To create space behind
- To force your opponent to hit upwards

Common Faults	Corrections
Hand not above racket head.	Hit with strings sloping towards net.
Lack of control.	PUSH shuttle, feel the shuttle on the strings.
Contact too low.	Place spare shuttle in net 30cm below tape – Practice net shots with racket above this height.

- Thumb grip
- Hand above racket head
- Reach

- Extended front (racket) leg
- Front foot pointing towards probable impact point, landing heel first, then toe
- Strong upright body position

- Contact well in front of body and high
- Hit with a pushing action
- Lunge lands heel then toe
- Rear arm extended for balance

- Rear leg slides in, to assist recovery
- Chassé/running steps backwards recovery

Using the information above and your chosen observations, **IDENTIFY** two strengths of the player observed.

1

2

Based on your observations **RECOGNISE** two areas for development and suggest how to improve performance.

1

2

LESSON 9:

Backhand Underarm Lift

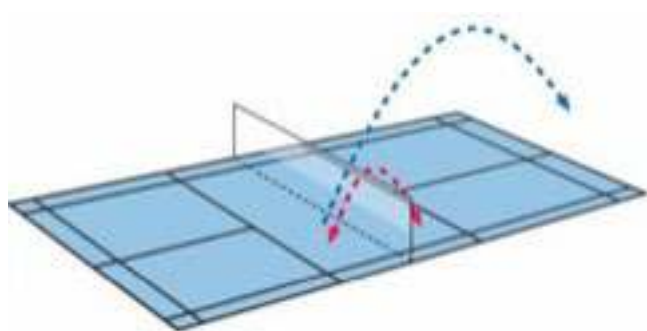

SKILL (15 minutes)

Introduce the key technical points of the Backhand Underarm Lift to the group, outlined on the following page

- Working in threes, player A hand feeds the shuttle over the net to player B who returns with a backhand underarm lift
- Player C stands in the midcourt with their racket above their head and is allowed to jump
- Player B's aim is to clear player C with their backhand underarm lift
- Player C collects the shuttle and returns to player A
- After five hits players change roles

SKILL PROGRESSION (15 minutes)

- Player A performs a low serve
- Player B returns the serve to player A's backhand
- Player A performs a backhand underarm lift, high enough to go over player B's head
- Play the rally to a conclusion or have a third player to collect the shuttle and start the routine again

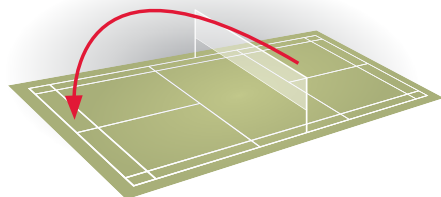

GAME (10 minutes)

- Play a game of half court singles or full doubles
- Play as usual but award doubles points if a rally is won by bringing the opponent into net and then winning the point with a backhand underarm lift that goes over their head

TOP TIPS

- Encourage players to lunge toward shuttle with knee and foot aligned

BACKHAND UNDERARM LIFT

Played from your forecourt to the rearcourt of your opponent.

Why?

- To move your opponent back
- To create space in front
- To exert pressure (flat) or create time (high)

Common Faults	Corrections
Shuttle dragged cross-court.	If you want the shuttle to go down the line, hit along the line. Shadow the shot and keep the racket head along the tramline as long as possible. Get someone to throw shuttles to you along the tramline whilst you hit them back along the line.
Exaggerated long swing.	Focus on flicking the shuttle. Assess yourself to see how many lifts you can do without taking racket head behind body. Use partner to assist you and feed back on this.
Lunge misaligned.	Shadow lunge and make sure knee bends in same direction that foot points.

Using the information above and your chosen observations, **IDENTIFY** two strengths of the player observed.

1

2

1

- Relaxed thumb grip ☐
- Pivot on non-racket leg ☐
- Reach towards shuttle ☐

2

- Rotate arm so strings face side of court ☐
- "L" shape created between racket and forearm ☐
- Slight elbow bend ☐
- Front (racket leg) extended ☐

3

- Lunge lands heel then toe ☐
- Hit through shuttle by extending elbow/rotating forearm/ squeezing fingers and thumb ☐
- Non-racket arm back for balance ☐

4

- Chassé (side-step) or run back to recover ☐

Based on your observations **RECOGNISE** two areas for development and suggest how to improve performance.

1

2

LESSON 10:

Backhand Overhead Clear

SKILL (15 minutes)

Introduce the key technical points of the Backhand Overhead Clear to the group, outlined on the following page

- In pairs, one player feeds the shuttle high using their racket
- Their partner practises a backhand overhead clear
- The server lets the shuttle land on the court, collects it and feeds it high again
- After five attempts players change roles
- Encourage players to perform a split-step timed to land with the opponent's hit

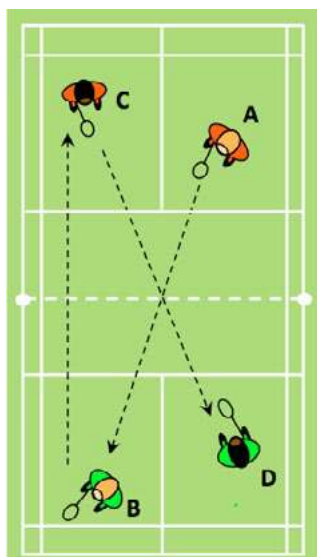

SKILL PROGRESSION (15 minutes)

With four players on a court, follow this routine:

- A high serves to B
- B performs a backhand overhead clear to C
- C performs a smash for D to defend

Points

- Count the number of shots achieved in a row
- Count the number of complete A to D circuits

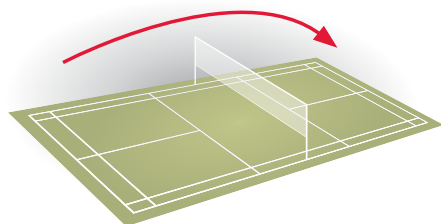

GAME (10 minutes)

- Play a game of doubles where a point can only be played to a conclusion once the initial routine above has been completed once
- Change the server after every point because the serving team has a distinct advantage

TOP TIPS

- An effective way to practise this shot is for players to strike a balloon/shuttle suspended with string from a pole/cane

BACKHAND OVERHEAD CLEAR

Played from your rearcourt to the rearcourt of your opponent.

Why?

- To move your opponent back
- To create space in front
- To exert pressure or create time

Common Faults	Corrections
Missing the shuttle.	Practice striking a suspended object (e.g. balloon).
Elbow points up too early = loss of flow/power.	Keep your elbow down (picture one) then rapidly flow into the hit (no pause between two and three).
Long swinging hit.	Encourage PUNCH hit with rebound. Use rotation of upper and lower arm rather than swing from shoulder. Maintain angles on preparation for longer.

Using the information above and your chosen observations, **IDENTIFY** two strengths of the player observed.

1

2

1

- Bevel grip established ☐
- "L" shape between racket and forearm ☐
- Racket starts to follow path of shuttle ☐
- Elbow low ☐

2

- Pivot on non-racket foot (back to net) ☐
- Momentarily in the "what time is it?" position ☐

3

- Forward swing flows from backswing ☐
- Contact to the side/behind body ☐
- Contact high but with slight elbow bend ☐

4

- Racket rebounds as you relax ☐
- Pivot back into court ☐

Based on your observations **RECOGNISE** two areas for development and suggest how to improve performance.

1

2

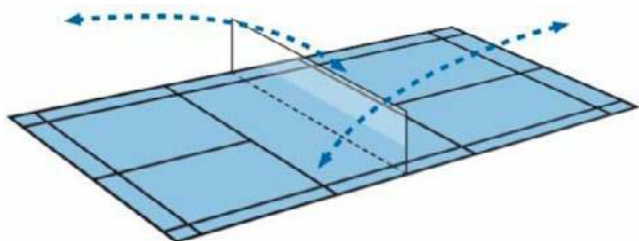

LESSON 11:

Backhand Overhead Drop

SKILL (15 minutes)

Introduce the key technical points of the Backhand Overhead Clear to the group, outlined on the following page

- In pairs, one player starts the rally with a high serve
- Their partner returns the serve with a backhand dropshot
- The server keeps the rally going by playing a high lift for their partner to again perform a backhand overhead dropshot, and so on
- The diagram illustrates how this practice can work safely and efficiently with four pupils on a court

SKILL PROGRESSION (15 minutes)

- In fours, players rally
- Any player who receives a high lift to their backhand side should play a backhand overhead dropshot
- One doubles pair can only play straight drop shots, whilst the other doubles pair can only play cross-court dropshots
- Encourage players to anticipate the dropshot being played by their opposition
- After five rallies, doubles pairs change the direction of their dropshots

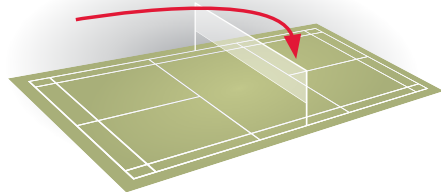

GAME (10 minutes)

- Play a game of doubles where one doubles pair is only allowed to lift the shuttle high and the other pair is only allowed to play dropshots
- After five points have been played, pairs change roles

TOP TIPS

- To hit straight or cross-court, adjust the racket face on impact so strings face the direction you would like the shuttle to go

BACKHAND DROP

Played from your rear court to the forecourt of your opponent.

Why?

- To move your opponent forwards
- To create space behind
- To make your opponent hit upwards

Common Faults	Corrections
Missing the shuttle.	Practice striking a suspended object (e.g. balloon).
Elbow points up too early = loss of flow/power.	Keep your elbow down (picture one) then rapidly flow into the hit (no pause between two and three).
Long swinging hit.	Use rotation of upper and lower arm rather than swinging from shoulder.

- Bevel grip established ☐
- Pivot back into court ☐
- "L" shape between racket and forearm ☐
- Keep elbow low ☐

- Pivot on non-racket foot (back to net) ☐
- Elbow rises as racket drops ☐
- Momentarily in "what time is it?" position ☐

- Forward swing flows from backswing ☐
- Contact to the side and behind body ☐
- Slow pace of racket so contact not as forceful ☐

- Pivot back into court ☐

Using the information above and your chosen observations, **IDENTIFY** two strengths of the player observed.

1

2

Based on your observations **RECOGNISE** two areas for development and suggest how to improve performance.

1

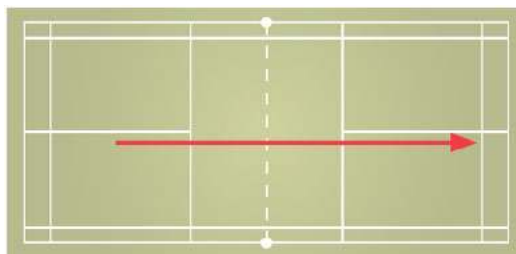

2

LESSON 12:

Tactical Matches

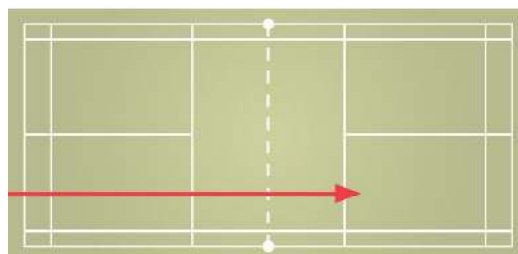

MATCH 1 - SINGLES (12 minutes)

- Play half court singles (or full court singles if space allows)
- During the game, if you hit the shuttle in the rearcourt and win the rally you score three points
- Consider what happens during the rally when you hit shots into the rearcourt?
- Compare the advantages and disadvantages
- Can your opponent guess your tactic?

MATCH 2 - SINGLES (12 minutes)

- Play half court singles (or full court singles if space allows)
- During the game, play mainly attacking shots (minimal lifts or clears)
- Consider what happens during the rally when you play attacking shots?
- Compare the advantages and disadvantages
- Can your opponent guess your tactic?

MATCH 3 - DOUBLES (12 minutes)

- Play full court doubles
- When receiving the serve, only attacking returns are permitted
- Consider what happens during the rally when you attack the serve?
- Compare the advantages and disadvantages
- Can your opponent guess your tactic?
